Preface

Overview

Helping South Dakotans Become Informed Health Care Consumers: South Dakota's Hospital Pricing Report, 2007 is a publication that was developed in accordance with South Dakota Codified Laws (SDCL) 34-12E-11 through 34-12E-13 and South Dakota Administrative Rules § 44:66. The report serves as a way for health care consumers to research a hospital's 25 most common inpatient diagnosis-related groups (DRG). A DRG is a classification assigned to an inpatient hospital service claim based on the patient's age and sex, the principal and secondary diagnoses, the procedures performed, and the discharge status.

The information used to develop the report came from the Health Care Financing Administration (HCFA) Uniform Bill-92 (UB-92) form. The UB-92 is a standardized form from the HCFA used to electronically submit claims for health care received in an institutional setting to payers.

The South Dakota Department of Health (SDDOH) contracts with the South Dakota Association of Healthcare Organizations (SDAHO) to gather and analyze the UB-92 forms for each facility. Once analyzed, the data is provided to SDDOH for placement on the website and in this report.

History

The language of SB169 was a recommendation that came from the South Dakota Health Care Commission, which was established in 2003. SB169 was passed during the 2005 Legislative Session creating SDCL 34-12E-11 through 34-12E-13. Shortly after the South Dakota Administrative Rules § 44:66 were developed.

Purpose of the Report

This report provides by hospital the median charge for the top 25 DRGs where there were more than 10 occurrences. This report contains hospital charge data from January 1, 2007 to December 31, 2007. A median charge is defined as the charge representative of the amount where half of patients were charged more and half of patients were charged less.

In instances where a hospital does not have 25 DRGs with at least 10 or more cases, the hospital reports all DRGs that have at least 10 cases. In instances where a hospital has more than one DRG in the 25th rank, the hospital shall report each DRG falling into the 25th rank.

Description of Report

The report is hospital-specific for the 25 most common inpatient DRGs along with case severity rating, the weighted numeric value reflecting average resource consumption by patients in hospital for its DRGs over a particular period of time, the volume of discharges for each DRG, the rank of each DRG, and the median charge for each DRG.

Contact Information

Any questions regarding Helping South Dakotans Become Informed Health Care Consumers: South Dakota's Hospital Pricing Report, 2007 should be addressed to:

Office of Data, Statistics, and Vital Records
600 East Capitol
Pierre, SD 57501-2536
Phone: (605) 773-3361

Hospital pricing information is also available on the internet at <http://hospitalpricing.sd.gov>.

The following people were the main contributors to the development of this report:

Barb Buhler	Public Information Officer
Kevin DeWald	HIPAA Compliance Officer
Carrie Cushing	Policy/Data Analyst
Anthony Nelson	Administrator, Office of Data, Statistics, and Vital Records

The Department of Health would also like to thank the following people for making this report possible:

Ken Senger	South Dakota Association of Health Care Organizations
Gilbert Johnson	South Dakota Association of Health Care Organizations
Molly Sandvig	South Dakota Association of Specialty Care Providers
Kyle Goldhammer	South Dakota Association of Specialty Care Providers
Thomas Dempster	Senator, District 9

Consumer Information

Consumer Information

Becoming an Informed Health Care Consumer

Health care consumers can become better informed by doing a number of things.

- ☐ Adopt healthy behaviors and visit their doctor regularly.
- ☐ Follow doctor's instructions about lifestyle issues such as diet and exercise.
- ☐ Learn about health insurance plan or medical benefits before they need them.
- ☐ Know the hospital; however remember many factors will affect a hospital's charges and utilization rates. Such factors include the availability of physicians and staff and the level of care or specialization of services offered.
- ☐ Understand the charges; however, charges shown in this report are different from costs, reimbursement, price, or payment.

Many factors will affect costs for a hospital stay including whether the health care consumer has insurance, the type of insurance, and the billing procedures at a given hospital. The amount collected by a hospital is almost always less than the charges. Three common examples are:

- ☐ Government programs such as Medicare and Medicaid pay hospitals much less than billed charges. These payments are determined by the government agencies and hospitals have no ability to negotiate reimbursement rates.

- ☐ Commercial insurers or other purchasers of health care services usually negotiate discounts with hospitals on behalf of the patients they represent.
- ☐ Many hospitals typically have policies that allow low-income persons to receive reduced-charge, free, or charity care.

Health care consumers should also keep in mind that it is always best to ask your hospital if you have questions about specific health care needs and what the charges might be for services.

Consumer Guide to Hospital Charges

The amount a hospital bills for a patient's care is known as the charge. This is not the same as the actual cost nor the amount paid for the care. This report lists the median charges billed by hospitals for their most common DRGs.

The DRG is the basic unit of analysis for inpatient hospitalization. The federal government established DRGs as a way to pay hospitals for the care of Medicare patients; many payers now use DRGs. Each DRG has a numeric weight or case severity rating reflecting the national average hospital resource consumption by patients for that DRG compared to the national average resource consumption of all patients.

The median charges for DRGs are derived from a standardized billing form, which lists the actual charges for each patient. The amount actually collected by a hospital (the amount paid) for each DRG is almost always less than the listed charge.

Charges are used almost universally to measure the relative costs of health care. While each hospital's charge structure may vary in important ways, charges represent a consistent, though imperfect, way to compare health care costs.

There are many reasons why charges may differ between hospitals. Generally, charges vary because no two patients are alike. Their conditions, reactions to medications or treatment, physician practices, or time of recovery will all impact the charge for care. Some of the more common reasons charges vary fall into the categories of patient variations and hospital variations.

Patient Variations

- ***Severity of illness and intensity of care*** - Some hospitals care for more severely ill patients than others. Patients with the same diagnosis may have complications, more than one disorder or disease occurring at the same time, or other related difficulties and may need very different levels of service and staff attention, causing variation in charges. Hospitals that treat more severely ill patients are expected to have higher case severity ratings, longer lengths of stay, and higher charges.
- ***Length of hospital stay*** - Longer hospital stays are likely to result in higher charges. Some patients, especially severely ill patients, may not respond as well to treatment or surgery and, therefore, may have to stay in the hospital longer. Other factors, such as older patients who require more services or who have more chronic or multiple conditions, also will require longer hospital stays.
- ***Emergency admissions*** - Hospitals with no emergency services will likely have lower charges.

One-third or more of hospital patients come through the emergency room. The costs of emergency services are included in patient charges.

- ***Physician practice and treatment*** - Individual physician judgment based on patient needs influences treatment decisions. The kinds of diagnostic tests ordered or preferred treatments also vary somewhat from physician to physician and influence hospital charges.
- ***Physician specialty*** - Because the education, training, and experience of each physician can vary significantly, a physician may involve other physicians in consulting roles. In these situations hospital charges can be generated by more than one physician for the same patient.

Hospital Variations

- ***Professional fees*** - Physician charges, including those of surgeons and anesthesiologists, are normally separate from hospital charges. The hospital charges listed in this report do **not** include such professional fees. The hospital charges may or may not include laboratory work, x-rays, and other professional services performed in conjunction with the diagnosis and service provided. The decision to include these services in the hospital charge varies by hospitals.
- ***Payer mix and cross subsidization*** - Charges vary among hospitals because of cross subsidization, which is used to help fund care for government-paid patients (such as Medicare, Medicaid, county poor relief) and the underinsured and uninsured where payments do not cover the costs to provide care. Cross subsidization, or cost shifting, means that

charges also reflect an amount to help pay for the uncompensated care provided by the hospital to government-program patients and to indigent patients. The amount that needs to be subsidized or charged will vary from hospital to hospital. Hospitals that have a relatively high percentage of government-program patients, such as nonprofit hospitals or those in rural communities where patients may have less employer-sponsored health coverage, are forced to recover a greater percentage of their operational costs from privately insured and self-pay patients through higher charges.

- ***New technology*** - The equipment hospitals use to provide services differ in age, sophistication, and frequency of use. Hospitals with the latest technology may have higher charges than those with older, less sophisticated equipment.
- ***Staffing costs*** - Salary costs differ by region and are typically higher in urban than rural areas. Shortages of nurses and other medical personnel affect regions differently. Where shortages are more severe, the competitive staffing costs may be higher, resulting in higher charges.
- ***Types and range of services*** - Hospitals often offer different levels of care and specialize in one or more types of services. For instance, a hospital may specialize in heart procedures or psychiatric care, and may show higher median charges than other hospitals for these services because of the expense involved in treating severe cases. Also, hospitals differ in the range of services they provide to patients. Some may provide the full range of services required for diagnosis and treatment during the stay. Others may

stabilize patients and then transfer them to another hospital for more specialized care.

- ***Service frequency*** - The per-patient cost of services is generally higher if the type of hospitalization occurs infrequently at the hospital. Infrequently used services may cost more than services that are used more frequently.
- ***Hospital cost structures*** - Hospitals differ in their operational costs. Some hospitals try to spread the cost of all services and equipment among all patients. Others establish charges for specific services based on the cost to provide each specific service. Furthermore, some hospitals may decide to provide certain services at a loss while other hospital operations subsidize the losses. Any of these situations can result in significantly different charges among hospitals for a given diagnosis or type of service.
- ***Capital expenses*** - Hospitals differ in the amount of debt and depreciation they must cover in their charge structure. A hospital with a heavy debt load, a new building, or major renovation to pay back may have higher charges than a hospital without such expenses. Furthermore, hospitals may choose to lease or purchase equipment or facilities. The choices made about financing of capital projects may affect charges in different ways.
